## Legend

-  Possible Oil
-  False-Positives (not oil)
-  Center Point of Oil Slick:  
[ 28°53'59" N / 90°56'45" W ]

## REMARKS:

Suspected oil slick located about 14 miles south of Caillou Bay off the coast of Louisiana. This slick is positioned just a bit southwest from the initial location report given by USCG MSU Morgan City. The northern portion of the oil slick is about 6 miles long and runs northwest to southeast. The slick also extends about 9 miles to the southwest from its center point which is consistent with the 5-10 knot southwest winds in the area.

The point source of the suspected oil is still unknown as there are many platforms in the vicinity of the oil but none of them can be directly linked.
