

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: May 13, 2011
REPORT TIME: 2000Z (1500 CDT)
ANALYST: VOGT

DATA SOURCE: MODIS TERRA
MODE: MULTISPECTRAL
RESOLUTION: 250 METER
IMAGE DATE/TIME: 05/13/11 1630Z (05/13/11 1130 CDT)

Legend

-  Possible Oil
-  False-Positives (not oil)
-  Center Point of Oil Slick:
[24°0'58"N / 86°34'2"W]

REMARKS: Possible oil slick located about 310 miles west of Key West, FL. The oil slick is approximately 40 miles long and appears to be broken into segments. The slick has a shimmering appearance in sunglint and feathers-out to the east-southeast which is in agreement with west-northwest low-level winds. There is no identifiable point source to the slick but it appears to be tracking to the west-northwest.
