

MARINE POLLUTION SURVEILLANCE REPORT

Analysis Provided by: The National Oceanic and
Atmospheric Administration/National Environmental
Satellite, Data and Information Service (NOAA/NESDIS)

REPORT DATE: APRIL 20, 2012
REPORT TIME: 2000Z (1500 CDT)
ANALYST: GALLINA

DATA SOURCE: MODIS TERRA
MODE: MULTI-SPECTRAL
RESOLUTION: 250 METERS
IMAGE DATE/TIME: 4/20/2012 1640Z (1140 CDT)

Legend

-  Possible Oil
-  False-Positives (not oil)
-  Destroyed Taylor Platform :
[28°56'9" N / 88°58'12" W]

REMARKS:

An anomaly is seen extending from the known leak site of Destroyed Taylor in a banana-shape arc toward the west-southwest extending about 18km with an average width about 2 km wide. It is possible the anomaly extends further west but darkness in imagery due likely to low winds and an area of suppressed waves making it difficult to impossible to fully determine anomaly edges. The western tip of the high confidence area is approx 35km south-southeast of the Bird's Foot Delta.
